Menu + Inventory

Pricing and availability are subject to change without notice based on inventory levels, supplier pricing and market conditions. Availability is not guaranteed until confirmation and your payment has cleared.

Last Updated May 6 2026

Product	Dose Per Vial	Injections Per Vial	Price Per Vial	Status
WEIGHT MANAGEMENT	MG VIAL SIZES CHANGE WITH AVAILABILITY/DEMAND			
Retatrutide (GLP-3)	15mg	7 injections - 2mg 5 injections - 3mg	$ 85.00	Available
Tirzepetide (GLP-1)	30mg	12 injections - 2.5mg 6 injections - 5mg 4 injections - 7.5mg	$ 50.00	Preorder
Tirzepetide (GLP-1)	60mg	8 injections - 7.5mg 6 injections - 10mg 4 injections - 12.5mg 4 injections - 15mg	$ 90.00	Preorder
Semaglutide (GLP-1)	10mg	10 injections - 1mg 5 injections - 2mg	$ 50.00	Preorder
HEALING / INJURY REPAIR				
BPC-157	10mg	40 injections - .25mg 20 injections - .5mg	$ 60.00	Available
TB-500	10mg	5 injections - 2mg 2 injections - 5mg	$ 60.00	Available
KLOW (GHK-CU 50mg + BPC-157 10mg + TB500 10mg + KPV 10mg)	80mg	25 injections - 3.2mg	$ 100.00	Available
Wolverine (BPC-157 + TB-500)	20mg	80 injections - .25mg 20 injections - 1mg	$ 90.00	Preorder
KPV	10mg	TBA	$ 50.00	Preorder
GLOW (GHK-CU 50mg + BPC-157 10mg + TB500 10mg)	70mg	25 injections - 2.8mg	$ 90.00	Preorder
MUSCLE GROWTH + RECOVERY	MG VIAL SIZES CHANGE WITH AVAILABILITY/DEMAND			
Tesamorelin	10mg	5 injections - 2mg	$ 75.00	Available
Ipamorelin + CJC-1295 (No DAC)	10mg	100 injections - .1mg 33 injections - .3mg	$ 80.00	Available
Sermorelin	10mg	TBA	$ 80.00	Preorder
HGH 1911A (Somatropin)	36iu	TBA	TBA	Preorder
SKIN HEALTH / ANTI-AGING				
Melanotan I (MT-1)	10mg	100 injections - .1mg 20 injections - .5mg	$ 60.00	Available
Melanotan II (MT-2)	10mg	100 injections - .1mg 20 injections - .5mg	$ 60.00	Preorder
GHK-CU (Cosmetic Grade)	5mg	Not for injection creams/serum use	TBA	Preorder
ENERGY ENDURANCE + METABOLIC HEALTH	MG VIAL SIZES CHANGE WITH AVAILABILITY/DEMAND			
DSIP	5mg	16.6 injections - .3mg 10 injections - .5mg	$ 50.00	Available
MOTS-C	10mg	10 injections - 1mg	$ 75.00	Available
NAD+	500mg	25 injections - 20mg 5 injections - 100mg	$ 65.00	Available
Selank	10mg	TBA	$ 50.00	Available
Semax	10mg	TBA	$ 50.00	Available
TEST CYP	250mg/ml 10ml	-	$ 100.00	Available
COCKBOMBS	70mg Tablet	1 Tablet 50mg Viagra + 20mg Cialis	$ 4.00	Available
Epithalon	10mg	TBA	$ 60.00	Preorder
AOD-9604	TBA	TBA	TBA	Preorder
B12	TBA	TBA	TBA	Preorder
HCG	TBA	TBA	TBA	Preorder
SLU-PP-332	5mg	TBA	TBA	Preorder
SS-31 (Elamipretide)	10mg	TBA	TBA	Preorder
SUPPLIES				
Hospira Bacteriostatic Water	30mL	---	$ 25.00	Available
Starter Kit 1 bacteriostatic/sterile water 1 water transfer syringe 8 insulin syringes (31G .3ml/cc 8mm) 8 alcohol prep pads Limit 1 per research vial	---	---	$ 25.00	Available
Complete Kit 1 bacteriostatic/sterile water 1 water transfer syringe 15 to 30 insulin syringes (31G .3ml/cc 8mm) 15 to 30 alcohol prep pads Limit 1 per research vial	---	---	15 pack - $30 20 pack - $35 25 pack - $40 30 pack - $45	Available
Insulin Syringe (31G .3ml/cc 8mm)			$ 1.00	Available
Bac/Sterile Water Transfer Syringe			$ 2.00	Available
Travel cases + more coming soon!				

Most peptides and related compounds can be sourced by request.

Important Notice - All products are intended for research and educational purposes only and are not approved by the FDA for the diagnosis, treatment, cure, or prevention of any disease. Individuals should conduct their own research and consult a qualified healthcare professional before considering the use of any peptide or investigational compound.

All products undergo independent third-party analytical testing (majority through Janoshik Analytical) to confirm identity, purity, and labeled concentration. Batch-specific Certificates of Analysis (COAs) are maintained for full traceability and are available upon request.

Peptides 101 + FAQ

What are peptides?

Peptides are short chains of amino acids that serve as the building blocks of proteins in the body. They are typically made up of 2 to 100 amino acids.

Peptides optimize hormone levels by stimulating the body's natural production rather than replacing them like steroids.

Your body makes peptides that serve important functions in some of your body's most necessary processes. For example, insulin is a 51-amino-acid-long peptide hormone that helps your cells take in sugars from your food to use for metabolism and store them in your liver.

Researchers have been working to develop peptides as treatments for some medical conditions since 1921. Insulin was the first peptide ever made in a lab by scientists (called a synthetic peptide), and it's been used to treat people with type 1 diabetes since 1923.

What is a GLP-1?

GLP-1 (glucagon-like peptide-1) is a hormone produced in the gut and brain after eating that regulates blood sugar, slows stomach emptying and induces feelings of fullness. It stimulates insulin release, reduces appetite and is the basis for medications like Ozempic, Wegovy, Mounjaro, Zepbound is used to treat type 2 diabetes and obesity. GLP-1 agonists mimic the action of this single hormone in the body.

The most popular active ingredients at this time:

Semaglutide - GLP-1 receptor agonist, FDA approved, known as Ozempic, Wegovy.

Tirzepatide - GIP (another natural gut hormone) + GLP-1 agonist, FDA approved, known as Mounjaro, Zepbound. This tends to be more effective for people.

Retatrutide - is a triple agonist targeting GLP-1, GIP and glucagon (hormone produced by the pancreas) receptors. It's increasing in popularity due to it being the most effective out of the three in clinical trials. It is not FDA approved and remains an investigational medication in late-stage Phase 3 clinical trials. Studies are expected to conclude around May 2026. Retratrutide also provides increase calorie burning via thermogenesis and increase in metabolism which may help help reduce side effects.

Some individuals may experience side effects with one compound but respond much better when switching to another. This is normally seen when starting Semaglutide.

If you are new or returning from a break, Retatrutide is suggested.

What's included with a peptide vial?

You will receive a sealed and sterilized vial of the peptide that is in a lyophilized (freeze-dried) powder form. Lyophilized peptides are stable, powdered forms of peptides created by removing water under vacuum, significantly extending shelf life from months to years compared to liquid solutions. They require reconstitution with bacteriostatic, sterile water or buffer before use.

What's included with a kit?

$30 Starter Kit:
1 sealed bottle of bacteriostatic or sterile water
8 syringes (31G .3ml/cc 8mm)
8 alcohol prep pads
1 syringe for water transfer
Everything you need to prepare an injection-ready vial for research

$40 Complete Kit:
1 sealed bottle of bacteriostatic or sterile water
Up to 30 syringes (31G .3ml/cc 8mm)
Up to 30 alcohol prep pads
1 syringe for water transfer
Everything you need to prepare an injection-ready vial for research

These research supplies are also available separately

How do I make the vial injection ready?

It's only a couple steps and instructions can be provided after purchase.

To help you understand, take your peptide vial, fill it with bacteriostatic water with a syringe, gently swirl the vial until the peptide is fully dissolved and you have a (reconstituted) vial ready for research.

What about storage and expiration?

Lyophilized peptides can last for several years when stored in a freezer at or below -4°F. If you plan to use them within a few months, they can also be kept in a cool, dark place. Always keep away from light, moisture, and temperature changes.

Reconstituted peptides should be stored in the refrigerator, away from heat and light. Most remain usable for 2-3 months, although some peptides may lose potency sooner or last longer depending on the specific compound.

Bacteriostatic water has an expiration date on the vial. It is recommended to use within 28 days after the first puncture, although many people continue using it beyond that timeframe at their own discretion.

Sterile water has an expiration date on the vial. It is for single use/only. Many people continue using it beyond that timeframe at their own discretion.

IMPORTANT NOTICE

For Research Use Only. Not for human or animal use. Products are not approved by the FDA and are not intended to diagnose, treat, cure or prevent any disease. By purchasing, you confirm you are at least 21 years old, understand these products are for research purposes only and accept full responsibility for proper storage, handling, use and compliance with all local, state and federal laws.

Potential Benefits of Peptide Therapy

Different peptides influence different biological systems, which is why they are often grouped by their primary benefits or use cases.

Weight Management

GLP-1 provides appetite suppression, increased satiety, improved insulin sensitivity and blood sugar control. Examples include **Semaglutide**, **Tirzepatide** and **Retatrutide**.

Healing & Injury Repair

BPC-157 (Body Protection Compound 157) accelerates tendon, ligament, and muscle repair by creating new blood vessels. It is also highly effective for gut health, sealing the intestinal lining and reducing GI inflammationIt is frequently used by athletes and active individuals to recover from strenuous training or injuries.

TB-500 (Thymosin Beta-4) is all about mobility and systemic recovery. It helps cells travel to injured areas to lower inflammation and prevent the formation of stiff, painful scar tissue. It's great for improving flexibility and joint health. It is frequently used by athletes and active individuals to recover from strenuous training or injuries.

Skin Health & Anti-Aging

GHK-CU is the ultimate anti-aging copper peptide for your appearance. It tells your skin to produce more collagen and elastin, which leads to firmer skin, fewer wrinkles, faster healing and supports hair growth.

Melanotan I (MT-1) stimulates melanin production in the skin, helping promote a darker natural tan and potentially increasing resistance to UV exposure. It is commonly used by individuals looking to achieve or maintain a tan with reduced sun exposure.

Melanotan II (MT-2) is more potent at lower doses than MT-2, producing faster and deeper tanning. MT-2 has more potential side affects such as nausea, facial flushing and increased libido.

Epitalon (or Epithalon) is known for its potential anti-aging and longevity-promoting effects. It primarily works by stimulating telomerase production to increase telomere length, which protects chromosomes and slows cellular aging. Studies suggest it boosts immune function, acts as a potent antioxidant, and helps regulate sleep through the pineal gland.

Muscle Growth and Recovery

Tesamorelin is a powerful tool for body composition. It signals the body to release growth hormone, which is highly effective at burning deep belly fat. It also helps with muscle tone, skin quality, and mental sharpness.

Semorelin stimulates the pituitary gland to produce and release natural human growth hormone (hGH), treating growth hormone deficiency and promoting anti-aging effects.

Ipamorelin + CJC-1295 this duo works together to trigger a natural, sustained release of growth hormone. It's perfect for better sleep, faster muscle recovery, and fat loss. It provides these results without the unwanted hunger or stress hormone spikes.

Energy, Endurance & Metabolic Health

MOTS-C acts as a systemic metabolic regulator. Mimics the metabolic effects of exercise by increasing insulin sensitivity, reversing metabolic decline, and improving athletic performance, primarily by activating AMP-activated protein kinase. This improves your body's ability to switch between burning sugar and fat (metabolic flexibility.)

SS-31 (Elamipretide) acts as a reset button for your mitochondria, which are the power plants of your cells. By reducing stress inside the cells, it restores your natural energy levels, clears brain fog, and supports the health of vital organs like your heart and kidneys.

AOD-9604 is a synthetic fragment of human growth hormone (hGH) designed to stimulate fat breakdown (lipolysis) and inhibit fat storage (lipogenesis) without causing the side effects of full-length growth hormone, such as elevated blood sugar or excessive muscle growth. It primarily targets adipose tissue, aiding in reducing stubborn body fat.

SLU-PP-332 - SLU-PP-332 is an experimental "exercise mimetic" drug that boosts metabolism, reduces fat, and increases mitochondrial function without physical activity. By activating Estrogen-Related Receptors (ERRs), it makes the body act as if it is training for a marathon, shown in studies to reduce fat mass and boost muscle energy.

Potential Benefits of Peptide Therapy Continued

Immune Support & Inflammation Control

KPV is a naturally occurring anti-inflammatory peptide that helps regulate immune response and reduce chronic inflammation. Often used to support gut health and inflammatory conditions such as IBD, colitis and skin irritation.

Cognitive Function, Sleep & Cellular Support

NAD+ acts as the primary fuel for DNA repair, cellular energy (ATP) production and the activation of longevity genes (sirtuins.) It is highly effective for reducing age-related fatigue, improving cognitive focus, and supporting recovery from chronic stress.

Selank acts as an anti-anxiety and nootropic agent that is designed to reduce stress, improve mood and boost cognitive function without the addiction potential of benzodiazepines. It stimulates erotonin metabolism and increases brain-derived neurotrophic factor (BDNF.)

Semax enhances cognitive function, focus and memory while providing neuroprotective benefits. IT works by increasing brain-derived neurotropic factor (BDNF) and modulating neurotransmitters making it effect for stroke recovery, reducing anxiety and improving mental clarity.

Skin Pigmentation and UV Support

Melanotan II (MT-2) stimulates melanin production in the skin, helping promote a darker natural tan and potentially increasing resistance to UV exposure. It is commonly used by individuals looking to achieve or maintain a tan with reduced sun exposure.

Cognitive Function, Sleep & Cellular Support

Compounds like **NAD+** support cellular energy production and brain function, while peptides like **DSIP** may help support sleep quality and neurological recovery.

Popular Compound Blends

The Wolverine Stack

A blend of **BPC-157** and **TB-500**, designed to support accelerated tissue repair, injury recovery and inflammation reduction. **BPC-157** promotes tendon, ligament and soft tissue healing, while **TB-500** supports cellular migration and tissue regeneration.

GLOW

A blend of **GHK-CU**, **BPC-157,** and **TB-500** designed to support skin rejuvenation, tissue repair, hair health and overall regenerative benefits.

KLOW

Same as GLOW with **KPV** added that provides regenerative support while also helping address inflammation, immune balance and gut health.
